

Reliance Industries Limited (RIL)

Company Stock Analysis Report — NSE: RELIANCE | BSE: 500325

Data as of close, 19 June 2026

Metric	Value	Metric	Value
Current Price	Rs. 1,309.5	Market Cap	Rs. 17.97 lakh Cr
52-Week High / Low	Rs. 1,611.8 / Rs. 1,253.2	P/E Ratio (TTM)	23.1x
1-Year Return	≈ -7%	Book Value / Share	Rs. 668
Dividend (FY26)	Rs. 6.00/share	Dividend Yield	0.45%
ROE / ROCE	8.9% / 10.3%	Promoter Holding	50.0%

1. Company Overview

Reliance Industries Limited (RIL) is India's largest private-sector company by market capitalisation and a Fortune Global 500 conglomerate led by Chairman Mukesh Ambani. Originally built on textiles and petrochemicals, RIL today spans four core engines: Oil-to-Chemicals (O2C) and oil & gas exploration, Reliance Retail, Jio Platforms (telecom and digital services), and an emerging New Energy business focused on solar, batteries, and green hydrogen at its Jamnagar Giga Complex.

2. Share Price Trend (Last 12 Months)

RIL shares have been broadly range-bound over the past year, touching an all-time high of Rs. 1,611.80 on 5 January 2026 before correcting sharply to a 52-week low of Rs. 1,253.65 on 11 June 2026. The stock has since recovered modestly to close at Rs. 1,309.50 on 19 June 2026, the day of the company's 49th AGM. Over the trailing one-year period the stock is down approximately 7%, underperforming the broader market even though RIL gained an exceptional 29% in calendar year 2025, its best annual performance since 2020.

Fig. 1 — Approximate RIL share price trajectory, Jun 2025–Jun 2026, based on reported monthly closing levels and 52-week high/low milestones.

The decline from January's peak reflects a mix of factors: softer O2C margins, a fall in quarterly net profit in the most recent results, and general caution ahead of the long-awaited Jio Platforms IPO. Technically, the stock currently trades below its 50-, 100-, 150-, and 200-day moving averages, though it has recovered above its very short-term (5–20 day) averages, suggesting an early, tentative stabilisation rather than a confirmed reversal.

3. Valuation, Market Cap & Dividend History

At a current price of Rs. 1,309.5, RIL trades at a trailing P/E of about 23.1x, against a book value of Rs. 668 per share (price-to-book of roughly 2x). Its market capitalisation of nearly Rs. 18 lakh crore makes it the most valuable listed company in India. Return ratios remain moderate for a company of its size, with ROE around 8.9% and ROCE around 10.3% over the last three years, which screening tools flag as comparatively low for a blue-chip conglomerate, reflecting the capital-intensive nature of its O2C and infrastructure businesses.

RIL has historically been a low dividend-payout company, consistent with its heavy reinvestment in telecom, retail, and new energy capacity. The dividend payout ratio has stayed in the single digits to low teens of profit over the last decade. For FY26, the company declared a dividend of Rs. 6.00 per share (record date 5 June 2026), translating to a dividend yield of under 0.5% — useful context for income-focused investors comparing RIL against higher-yielding peers.

Fiscal Year	FY22	FY23	FY24	FY25	FY26
Revenue (Rs. Cr)	694,673	876,396	899,041	962,820	1,055,780
Net Profit (Rs. Cr)	67,845	74,088	79,020	81,309	95,754
EPS (Rs.)	44.87	49.29	51.45	51.47	59.69

Table 1 — Consolidated revenue, net profit, and EPS, FY22–FY26 (Source: company financials via Screener.in).

Fig. 2 — Revenue has compounded at roughly 15% over 10 years and 6% over the last 3 years; net profit grew about 14% year-on-year in FY26, aided by strong retail and digital services growth.

4. Future Growth Prospects

- **Jio Platforms IPO (the biggest near-term catalyst):** On 19 June 2026, Jio Platforms filed its Draft Red Herring Prospectus (DRHP) with SEBI — a 100% fresh issue of up to 27 crore shares, with no offer-for-sale component, expected to raise roughly Rs. 35,000–40,000 crore. Estimates value Jio at \$133–180 billion, which would make it one of India's top 2–3 most valuable listed firms. Because the entire raise goes into the business rather than to selling shareholders, and because existing RIL

shareholders are expected to get priority allocation, the listing (expected August–October 2026) is widely seen as a potential re-rating trigger for the parent stock by giving the market a transparent, standalone valuation for the digital business.

- **Retail expansion:** Reliance Retail added 1,564 new stores in FY26, taking its total count to over 20,160 stores, continuing its push into grocery, fashion, and quick commerce.
- **New Energy / Green hydrogen:** The Jamnagar Giga Complex began commercial production of heterojunction (HJT) solar modules in FY26 and continues to build out battery and bioenergy capacity, positioning RIL for India's renewable-energy transition through 2030.
- **AI and digital infrastructure:** RIL announced a partnership with Meta to build a 168 MW AI-enabled data centre in Jamnagar, and Jio Platforms has been expanding its patent portfolio in AI and connectivity, signalling a strategic push beyond core telecom into compute infrastructure.
- **Key risks:** A final Jio IPO valuation that disappoints relative to the high end of analyst estimates, continued softness in O2C/refining margins, global crude oil price volatility, and broader emerging-market equity sentiment could all weigh on the stock independent of RIL's underlying operating performance.

5. Conclusion

RIL's share price has been weak over the past year despite strong underlying revenue and profit growth, largely because the market has been waiting for clarity on the Jio Platforms IPO and watching for a recovery in refining margins. With the Jio DRHP now formally filed, investors have a clearer, nearer-term catalyst to watch over the next two to three quarters. Long-term, RIL's diversification across energy, retail, telecom, and new energy gives it multiple independent growth engines, though its relatively modest return ratios and thin dividend yield mean the investment case rests more on growth and re-rating potential than on current income or profitability efficiency.
